Route coverage & reading guide

Desktop route inventory, separate tab/context screens, responsive representatives and reusable state specimens. All sample people, dates and figures are illustrative.

Aliases are not extra pages

/login → /
/admin/organizers → /admin/users
/organizer/reports/{module}/:eventId → canonical module report
/voter/* → /participant/*, preserving query/hash
/tabulation → /tabulation/overview
Legacy ?tab=voters|judges|respondents → participant subtype

Deployment-dependent competition

Native setup, scoring and results flags are UNKNOWN. Primary native concepts and legacy compatibility workspace/scoring/results are included. These preserve documented capabilities, not verified deployment layouts. Registry-driven question configurations are illustrative, not a fixed API type list.

Responsive reuse, not full mobile coverage

Mobile: login, three role dashboards, users, event list/details, ballot/review, poll, judging, live control, public results. Tablet: rail, table and matrix transformations. Shared desktop controls, state grids and contextual dialogs support the remaining pages. No public polls, billing or registration.

ⓘ Source audit is the content authority
Only documented fields and actions are represented. Dates use native date-time fields; polling has no expiration field. Administrators create accounts; organizers enroll existing accounts.

VOTRIX / CIVIC & EDUCATION OPERATIONS

• UI design · 2026

Calm precision. Confident participation.

A role-aware interface for elections, competition scoring and polling. Data first, with clear context and deliberate operational safeguards.

Semantic color foundation

Light workspaces framed by navy navigation. Module color supports text labels, never replaces them.

Lifecycle and operational language

• Draft • Scheduled • Active • Completed • Cancelled • Archived

Setup editable only in draft. Publishing schedules the event; it does not start a competition session. Active rosters lock by default. Terminal events remain read-only.

Competition session • Idle • Active • Paused • Completed • Official rules frozen · separate lock

ⓘ Editable source specimens, not native component sets
All designs use editable text, shapes and layouts. Shared specimens are named for later conversion. No prototype links or interactions are included.
